	ALIGNMENTS T29982 standard; CDNA to mRNA; 316 BP. T29982 standard; CDNA to mRNA; 316 BP. O2-SEP-1996 (first entry) Human gene signature HUMGS05943. Gene signature; messenger RNA; mRNA; relative abundance; frequency; human; cloning; mapping; non-biased library; diagnosis; detection; cell typing; abnormal cell function; ss. WOS514772-A1. O1-JUN-1995. O1-JUN-1995. O1-JUN-1995. O1-JUN-1995. MATSUBARA K. (OKUBY) OKUBO K. MATSUBARA K. MAT	Claim 1; Page 1501; 2245pp; Japanese. A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS sequences given in T19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'- untranslated sequence is unique to a particular mRNAs pecies, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be cetermined (esp. using primers and probes derived from the GS. sequences) as a means of diagnosing abnormal cell function or for recognising different cell types. TO5868 encodes a chicken leucocytozoan immunogenic protein, this DN or a fragment of it can be used in a recombinant vaccine to immunis against chicken leucocytozoan disease. The DNA is used in a vector and operatively linked to an expression regulatory sequence as in standard practice.
                                                                                                                               Chicken leucocytozoan DNA encoding immunogenic protein for vaccine Chicken leucocytozoan; immunogen; recombinant vaccine; protection;

Claim 8: Page 36: 135pp; English.

T28076-T28113, and T28131-T28173 represent novel senescent-related gene sequences isolated from fibroblasts using the method of the invention.

In the method of the invention, mRNA is isolated from a senescent cell, and the mRNAs are amplified (using primers such as those shown in T28044-T28075) in separate reaction mixtures. The amplified sequences are then separated by size or charge, and the products are analysed to identify a gene from young quiescent cells and dividing cells, that is present at a different level from senescent colls. To enhance the method even more, it can be performed in conjuncture with an enhanced differential display (EDD) method (an mRNA preparation method) on the fibroblasts. The method can be used for the rapid and efficient identification and isolation of senescence-related genes and gene products, and to detect and distinguish between senescent cand non-senescent cells. It can also be used to destroy cells expressing senescence specific (or related) gene expression in senescent cells. The method can also be used to ameliorate problems associated with the accumulation of senescent cells such as age-related lipofuscin cacumulation in the retina, and in the treatment of AIDS. Also, the method can be used to distinguish young cells from senescent cells in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   31-DEC-1996 (first entry)
Probe 03F1 isolated from fibroblasts.
Problemed differential display: EDD; mRNA preparation; senescent cell; quiescent cell; dividing cell; senescence-related gene; gene expression; non-senescent cell; age-related lipofuscin; retina; therapy; liver spot; donor tissue; senescent melanocyte; melanin; hypopigmentation; ss.

Purchas and in production of antibodies, for diagnosis and therapy of malaria.

Disclosure; Fig 7: 108pp; English.

An open reading frame of 2349 bps extends from the 5' terminal end of the corresponding preference of the characteristics of other malaria nucleic acid sequence displays some of the characteristics of other malaria nucleic acid sequences: tandemly repeated motifs, high Ar content and a high corresponding preference for codons containing these bases, and a high content of codons for glutamate. Three major repetitive sequences are: one motif from bp 34 to bp 156 is repeated from bp 289 to bp 411; another conting from bp 567 to bp 611; a third motif from bp 1174 to bp 1233 is repeated tandemly 11 times. This last repetitious region consists of 360bp repeats differing only in 3 bases GAT coding for aspartate. This region is flanked to the 5' terminal od a degenerated 60 bp repeat. GC content of the coding part of the insert is on average 30%, and of the non-coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ÷

                                          responsible for infection

Example 4: Column 15-20: 22pp; English.

The present sequence encodes a species specific Plasmodium vivax malarial antigen, PVESP-1. The gene appears to be missing a small portion of its 5' end. This protein is secreted into the plasma of a susceptible mammalian host after infection. Monoclonal/Polyclonal antibodies can be utilised in assays used to diagnose malaria, as to determine whether P. vivax is the species responsible for the

The DNA may be used to express Psf230 in a host cell. It can also be used in vaccines (by incorporation into viral vectors which are then used to infect host cells) and oligonucleotides derived from it can be used to identify homologous proteins in other spp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Expression of plasmodium falciparum poly:peptide(s) from CDNA - for use in immunisation against malaria infection
claim 6; Fig 2; 65pp; English.
The inventors claim a DNA SO which comprises a nucleotide sequence
corresp. to all or part of Plasmodium falciparum RNA. Also claimed
is a synthetic peptide or polypeptide displaying the antigenicity
of all or part of a P. falciparum antigen. The base sequence of clone
Ag16 (see N40272) indicates that the antigen coded for by this
partial polynucleotide sequence has a homologous repeat structure of
Sequence 389 BP; 200 A; 22 C; 91 G; 76 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          719 AAATCACAGAAGTAACTGCTCCCCTGAGGATAATCCTGTAGAAGATTCACAGGTAATTG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                 09-JAN-1992 (first entry)
Sequence of the first 389 bases from the 5' end of the cDNA
insert in clone Agl3 which contains both 24 base repeats and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2.2%; Score 53.4; DB 1; Length 389;

Per l'realment oi autoimmune disease and lor i and b cell piolileration, per l'esalment oi autoimmune disease and lor i and b cell piolileration, per c'his coba sequence encodes a novel pi60 (160.1) which is capable cof activating transcription of a variety of genes upon activation of p62 and is capable of binding to the p62/p56lpk complex to modulate Lck and is capable of binding to the p62/p56lpk complex to modulate Lck controlled in a manner similar to p62. The genes transcribed in response to p160 activation in a manner similar to p62. The genes transcribed in response to p160 activation likely include those of which are involved in T or B cell development/differentiation, T or B cell activation or production of T or CC because the specific factors e.g. lymphokines or antiboddes. This p160 to p01ypeptide is also a substrate for serine/threonine kinase activity. P160 polypeptide is also a substrate for serine/threonine kinase activity. P160 polypeptides can modulate degradation of cellular proteins e.g. cycle requilatory proteins stimulating expression of cell cycle dependent conditions in the progression at specific conditions in the per series of the conditions and arresting cell cycle progression at specific confections by pathogenic microorganisms. P160 can be used to expand T cell populations for treating infectious diseases or cancer and p160 confinibitors could reduce B or T cell responses and may be used to treat a confinibitors could reduce B or T cell responses and may be used to treat a confirment diseases, e.g. diabetes mellitus, arthritis, multiple sclerosis allergic reactions, choic diseases etc.

New Polypeptide(s) inducing protective antibodies - having mediator function on infected red corpuscles and useful as diagnostic agents and vaccines.

If diagnostic agents and vaccines.

Claim 6: Fig 3: 66pp; French.

Chaving at least one epitope characteristic of a protein present on the surface of red blood cells (REC) infected with plasmedium falciparum (P.f.). They are useful as immunogens in protective vaccines against malaria, and for in vitro immuno-detection of P.f. in tissues or biological fluids. Nucleic acid sequences encoding the polypeptides are also claimed, and so are nucleotide probes contq. all or part of the nucleic acid sequences.

Sequence 616 BP; 272 A; 46 C; 154 G; 144 T;
                                                     021769;

This country of tumours

Claim 82; Fig 10: 175pp; English.

This country accordes a novel p160 (160.2) which is capable

Co of activating transcription of a variety of genes upon activation of p62

and is capable of binding to the p62/p56lpk complex to modulate Lck

function in a manner similar to p62. The genes transcribed in response to

p160 activation likely include those of which are involved in T or B cell

development/differentiation, T or B cell activation or production of T or

B cell specific factors e.g. Lymphokines or antibodies. This pi60

Co polypeptide is also a substrate for serine/threonine kinase activity.

D160 polypeptides can modulate degradation of cellular proteins e.g. cell

CC cycle regulatory proteins stimulating expression of cell cycle dependent

Kinase inhibitors and arresting cell cycle progression at specific

Coundaries to thereby modulate cell proliferation. As p160 boosts B cell

CC response it may be used to treat disorders where this is beneficial, e.g.

C infections by pathogenic microorganisms. D160 can be used to expand T

C cell populations for treating infectious diseases or cancer and p160

CC inhibitors could reduce B or T cell responses and may be used to treat a

CV arriety of autoimmune diseases, e.g. diabetes mellitus, arthritis,

C multiple sclerosis allergic reactions, Crobin's diseases etc.

/organism="Homo saplens"
/note="Organ: brain; Vector: pCR2.1-TOPO (Invitrogen);
Site_1: EcoR1; Total RNA (purlifted with Trizol and DNAsed
before use) was reverse transcribed using a modified
oligo-dT primer containing RsaI and HindIII sites.
Double- stranded cDNA was digested with RsaI, resulting in
blunt ended cDNA of an average 0.1-2 kb in length.
Digested cDNA was split into two sets, one used as is as
the driver, the other set was split in half again and each
half linked to a different adaptor (5 - TCGACCGGCCGCCGCGCAGGAGT-3' or 5' -
AGGCGTGGTGCGGCAGGAGT-3'), to be used as tester.
Subtraction was performed using the Clontech PCR Select
cDNA subtraction kit. Pool of two schizophrenics, male age
two mentally normal male individuals ages 41 and 53 cm of two mentally normal male individuals ages 41 and 53 cm or contact and contact and

Mouse inhibitor of apoptosis protein homologue MIHE.
Inhibitor of apoptosis protein; IAP; mammalian IAP homologue; MIHE; degenerative disease; infectious disease; autoimmune disease;
                                                                                                                                                                                                                                                                                                                                                                          MIHE (W19749) is a murine homologue of baculovirus inhibitor of apoptosis protein (IAP). Its amino acid sequence was deduced from an isolated nucleic acid (see also 172714) obtd. by a database search for sequences homologuus to a baculovirus IAP repeat (BIR) consensus sequence (see also W19744). Unlike IAP, MIHE does not contain a RING finger domain. IAP homologues (see also W19745-48 and W19750-52) and their derivatives and chemical analogues can be used in methods for modulating apoptosis in animal cells, specifically for treatment, by inhibition, of degenerative and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Fig.2; 163pp; English.

By chromosomal walking from the esterase D gene on chromosome 13, the retinoblastoma susceptibility gene (RB) was identified on the basis of chromosomal location, homologous deletion and tumor-specific alterations in expression. Screening of CDNA libraries yielded clone RB-5 incorporating the complete RB cDNA sequence given in Q86398 and encoding a 110-140 kDa nuclear phosphoprotein named pp110RB (R71680).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Disclosure; Fig. 30; 163pp; English.

By chromosomal walking from the esterase D gene on chromosome 13, the retinoblastoma susceptibility gene (RB) was identified on the basis of chromosomal location, homologous deletion and tumor-specific alterations in expression. Screening of CDNA libraries yielded clone RB-5 incorporating the complete RB cDNA sequence given in Q86398 and encoding a 110-140 kDa nuclear phosphoprotein named ppilORB (R71680). Recombinant ppilORB was prepared in E. coli, but with a P2A mutation for cloning convenience (R71681).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       W09411;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  KWEDT
                                                                                                                                                                  susceptibility to them.

Spiclosure: Fig 2: 11pp; English.

A 110-114 kDa phosphorotein product (W09411) of the retinoblastoma susceptibility to them product (W09411) of the retinoblastoma susceptibility gene is designated ppRB110. Its sequence was deduced from a full-length cDNA sequence that included the sequence of a colone derived from the retinoblastoma cell line Y79. ppRB110 is primarily located in the cell nucleus and has DNA binding activity. The absence or loss of ppRB10 mediates oncogenicity. ppRB110.

The absence or loss of ppRB10 mediates oncogenicity. ppRB110 is diagnosing hereditary predispostion to retinoblastoma or to other diseases controlled by the retinoblastoma gene such as corticolled by the retinoblastoma gene such as provision of ppRB110 to an individual through molecular induction and gene transplanting may be used as a means of suppressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The sequence is that of a retinoblastoma tumour protein. The gene encoding this protein may be used in a novel method involving a recombinant adenovirus expression vector to treat diseases associated with the ansence of the TSG or the presence of a mutated TSG, e.g. many forms of carcinoma, sickle cell anaemia or Tay-Sach's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Blocking Ras-induced effects on a cell - by introducing a GTPase activating protein to the cell, used esp. in treatment of cancers Disclosure; Page 36-44; 87pp; English.

Eleman merofibromatosis type 1 (RRI)-GAP related domain (GRD) was cloned into the yeast expression vector pkil0 to obtain pkpll. The pkPll DNA was mutagenized by hydroxylamine in vitro and transformed into S. cerevislae TKL61-R3V-D, which carries an oncogenic-type RAS2Vall9 mutation. The heat shock sensitivity of the clones was checked. Plasmid DNAs were recovered, re-transformed into TKI61-R2V-D, and phenotypic reversion was examined. 2 Clones, NF201 and C NF204 (given in R59922), which had strong suppression activity for RAS2Vall9, were selected. The mutant NF1-GRDs were also able to cinhibit v-Ras-induced transformation in mammalian cells.
                                                                                                                                                                         Blocking Ras-induced effects on a cell - by introducing a GTPase
T activating protein to the cell, used esp. in treatment of cancers
Disclosure; Page 44-52; 87pp; English.

Human neurofibromatosis type I (NRI)-GAP related domain (GRD) was
C then a metagenized by hydroxylamine in vitro and transformed
into the yeast expression vector pkTl0 to obtain pkPl1. The
pkPl1 DNA was mutagenized by hydroxylamine in vitro and transformed
into S. cerevisiae TKlG1-R2V-D, which carries an oncogenic-type
C RASZVal19 mutation. The heat shock sensitivity of the clones was
checked. Plasmid DNAs were recovered, re-transformed into TKf61-
C RZV-D, and phenotypic reversion was examined. 2 Clones, NF201
(given in R59921) and NF204, which had strong suppression activity
C for RASZVal19, were selected. The mutant NFI-GRDs were also able
to inhibit v-Ras-induced transformation in mammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Detection of defective ras regulation at the neurofibromatosis type of gene in tumour - by detecting mutation in specified region of gene claim 1: Columns 17-38; 35pp; Bnglish.

The present sequence is human neurofibromin (hNF), which is largely homologous to yeast IRA protein (inhibitory regulators of the ras-cAMP pathway) and mammalian GAP (ras p21 GTPase activating proteins). The hNF gene is the human neurofibromatosis type proteins). The hNF gene is the human neurofibromatosis type in (NFI) gene, sommatic mutations of which in the region spanning nucleotides 3809-4888 of the NFI cDNA, in human tumours, indicates defective ras regulation. Therefore a tumour found to contain a somatic mutation in the NFI gene can be treated using ras activity as the focus, whereas a tumour not containing a somatic mutation other courses of treatment. A tumour containing a somatic mutation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in the NFI gene can be treated by inactivating ras p21, also as GAP p120 is present, but apparently latent, GAP p120 activation would be beneficial and finally inhibition of GDP/GTP exchange would also counteract the loss of hNF or hNF GAP related domain activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA sequences to von-Recklinghausen neurofibromatosis gene - and derived amino acid sequences and probes for screening NFI in early
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nfl gene product.
Von Recklinghausen neurofibromatosis disease; autosomal dominant;
                                                                                                                                                     Location/Qualifiers

Vibrio cholerae strain 395 accessory cholera enterotoxin choleragen; cholera enterotoxin; choleragen; cholera toxin; diarrhea; vaccine; plasmid pCVD620; ACE.
Claim 25; Page 67; 122pp; English.

This is the amino acid sequence of the von Recklinghausen neurofibromatosis (Nf1) gene product. It and antibodies raised to it can be used in hybridisation and immunological assays to screen for the presence of a normal or defective Nf1 gene product. Functional assays to measure levels of gene function can also be used for diagnosis or to monitor treatment. Patient therapy through supplementation with the normal Nf1 product which can be produced by recombinant techniques is also possible.
                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Purified proteins and compans. - regulate expression of MHC class II genes and bind to controlling DNA sequences.

Claim 6; Fig 10; 83pp; English.

Claim 6; Fig 10; 83pp; English.

The protein which regulates the expression of MHC class II genes by compared to the protein which regulation. It causes down regulation, useful for the prevention and treatment of autonomination of treatment of autonomination of treatment of autonomination of the match of autonomination of the match of also be used for screening and Rheumatoid Arthritis. It can also be used for screening and entitying substances capable of inhibiting the expression of the MHC II genes. A polypetide comprising only the DNA binding domain (see feature table) will be also Ro8338, R07661 and R08391.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                              Example 12; Column 37-44; 55pp; English.
This is the 11 kba protein sequence of accessory cholera enterotoxin encoded by a 297 bp ORF (accessory cholera enterotoxin; ACE) in plasmid pcVD620. This protein may be useful in the construction of cholera vaccines.
Sequence 395 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                New avirulent Vibrio cholerae strains - comprise deletions in the cholera toxin and zonula occludens toxin genes, for vaccination against cholera

The function protein and related nucleic acid - for diagnosis or therapy of Huntington's disease

Claim 2; Fig 4; 112pp. English.

This is the amino acid sequence of the human huntingtin protein.

The gene sequence is characterised in that it contains a number of cAG repeats in the 5' region (in this case 23 repeats). In healthy whereas in patients suffering from Huntington's disease (HD), the number of repeats increases to 37-73 or 37-86. The huntingtin gene or spans 210 kb and encodes a protein of 348 kb. The gene is found in a 500 kb region between the chromosomal markers 045180 and 045182 and is preferentially mapped to the locus 4p16.3. The protein or the gene encoding it, is useful for detecting a predisposition to develop HD, therapy. W44742; 01-JUN-1998 (first entry) Human huntingtin protein. reading frame contains a polymorphic (CAG)n trinucleotide repeat with at least 17 alleles in the normal population, varying from about 11 to 34 CAG copies. Huntington's disease (HD) is a progressive neurodegenerative disorder characterised by motor disturbance, cognitive loss and proceed formonosome 4. On HD chromosomes, the length of the trinucleotide CAG repeat is substantially increased, e.g. about 37 to at least 73 copies. The huntingtin gene and proteins encoded by it, may be used for the diagnosis or treatment of Huntington's disease. The huntingtin gene can sepecially used in gene therapy of a symptomatic or presymptomatic patient. The method comprises providing a functional huntingtin gene with a (CAG)n repeat of the normal range of 11-34 copies, or an antisense sequence, to the desired cells of the patient, in a manner that permits the expression of the mutated huntingtin gene, for a time and in a quantity sufficient to provide the huntingtin gene, for a time and in a contain and the cells of the patient in the cells of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein-1 - useful for screening for drugs for treating or protein-1 - useful for screening for drugs for treating or protein-1 - useful for screening for drugs for treating or protein-1 - useful for screening for drugs for treating or a preventing Huntington's disease.

Claim 20; Page 22-32; 69pp; English.

Huntington's disease (HD) locus. Proteins which specifically bind to Hn. such as human huntingtin associated protein-1 (HAPI) (see also W09870), can be used in assays for screening drug candidates. The binding between Hn and HAPI is enhanced by an expanded polyglutamine repeat in Hn, the length of which correlates with the time of disease onset. HAPI, in contrast to Hn, is expressed to selectively in the brain, suggesting that it may contribute to the brain-specific pathology of HD. Hn, or portions of it, esp amino acids 1-230, or yeast cells expressing Hn, can be used to identify the method is useful for screening candidate drugs for treating, elelating onset of, or preventing HD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treatment of hypotension, esp. in septic shock - by administering transforming growth factor-beta e.g. to inhibit inducible nitric oxide synthase gene transcription
Disclosure, Fig 18, 52pp; English.

Transforming growth factor-beta 2 (TGF-beta 2) has been found to inhibit inducible nitric oxide synthase (iNOS) gene transcription, esp. in interleukin-1-beta (ILI-beta) stimulated rat smooth muscle cells, and at a dose which does not inhibit consitutive NOS. TGF-beta 1 (R83054) or 2 or their active fragments (esp. derived from the carboxy-terminal 112 amino acids), can be used in the treatment of hypotension, such as that associated with severe inflammation or septic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          25-JUN-1996 (first entry)

This sequence represents human transforming growth factor-beta 2 (TGF-beta 2). The sequences for human TGF-beta 1 (see R73596) and human TGF-beta 3 (see R73598) are claimed within the scope of the invention. The invention is a composition consisting of a TGF-beta protein and an osteogenic cell source (CGS) formulated in an acceptable carrier other than a bone morphogenic cofactor. This composition can be used for the mature bone only where it is required, without the inclusion of a specific bone-inducing cofactor. This method can be used with any of the shuman TGF-beta's or with TGF-beta from other species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Antagonists - for modulating blood pressure, for treating antagonists - for modulating blood pressure, for treating hypertension and hypertension and hypertension and hypertension.

Bisclosure; Fig 2: 42pp; English.

A new method for treating hypertension comprises administering a transforming growth factor (TGF)-beta to an individual at a dose effective for lowering blood pressure; the TGF-beta may be e.g. mature TGF-beta, a mature TGF-beta may be e.g. betal precursor, a latent TGF-betal precursor, hybrid TGF-betal.

Detal precursor, a latent TGF-betal complex or a latent TGF-betal.
 16-APR-1992 (first entry)
Sequence of human transforming growth factor (TGF) beta-2-442.
Hypertension therapy; hypotensive agent; blood pressure modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (ONCO-) Oncogen Ltd Partner.

Cloning and expression of transforming growth factor beta 2 -
used for treatment of tumors or for augmenting wound healing.

Claim 1; Fig la; 58pp; English.

TGF-Beta2 may be used in treatment of tumors at effective doses,
and may also be useful in augmenting wound healing by stimulating cell proliferation. The growth factor can be produced at high levels from a CHO expression system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 43; DB 4; Length 442;

New DNA sequence encoding transforming growth factor beta 2 -
used for large scale expression in eucaryotic cells
Claim 4; Fig la; 27pp; German.
PolyA-RNA was isolated from the tamoxifen-treated, human prostatic
adenocarcinoma line PC-3 and converted to cDNA. TGF DNA is pref. used
for control of the SV40 promoter. and expressed in CHO cells. The simian
                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hybrid transforming growth factor beta-1/TGF-beta-2 precursor - used to produce biologically active, mature TGF-beta-2 Disclosure; Fig.1a; 52pp; English.
This sequence is expressed in a host cell, preferably a COS or CHO cell, so the host cell produces active TGF-beta2. The produced TGF-beta2 protein can be used to regulate cellular differentiation and proliferation.
                                                                                                                                                                                                                                                                                                                                                                         Gaps

This protein comprises rat prolactin; substituted at residue 173 (serine in the native sequence). It has prolactin antagonist cartivity, antagonising the stimulation of T lymphoma cell growth in the presence of non-phosphorylated prolactin. Other claimed prolactin antagonists (see W32608·18) comprise prolactin of prolactin mutant C-terminal peptides. Claimed antagonists can be used for the treatment of prolactino. They are also useful for treatment of prolactinoma, infertility related to abnormal prolactin requiation irregularities, as well as in assays to measure and ovulation irregularities, as well as in assays to measure levels of non-phosphorylated and phosphorylated prolactin as an indicator of reproductive pathologies and presence or status of a continual continuation continual continual continuation con

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA coding for prolactin - obtd, by prepn. of reverse transcript of mRNA coding for prolactin and inserting into a transfer vector. Disclosure; p; English.

The cDNA encoding the prolactin can be inserted into expression vectors for the prodn. of rat prolactin which can be admin, to dairy cows to increase milk yield. The protein can also be used as a female contraceptive and to ensure adequate milk prodn. for breast feeding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Table 1; 12pp; Japanese.

The gene encoding the protein can be ligated into an expression plasmid with a promoter, SD sequence and initiation codon for the promoter study of the physiological activity of rat and human prolactin. Sequence 226 AA;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

This enzyme uses ferrous iron as a cofactor, and while beta-hydroxylating the peptidyl-aspartate substrate converts alpha-ketoglutarate to succinate and releases carbon dioxide. Aspartic acid and asparagine residues in the EGF homology domain of certain plasma proteins serve as the peptidyl-aspartate

#superfamily peptide-aspartate beta-dioxygenase; tetratricopeptide repeat homology

substrate.
